

# Contribution Statement

## Jason Duran Dutton

University of Westminster PhD by Published Work Submission

### 1. Author and Research Program

I, Jason Duran Dutton, am the sole author and originator of the SEFI-DEFI-GWFM unified geometric field program and all manuscripts, mathematical constructions, and software engines submitted as part of this doctoral submission. The research corpus represents a continuous self-directed program developed between 2020 and 2026.

### 2. Independence of Research

The research was conducted independently, without institutional supervision, external collaborators, or co-authors. All manuscripts, figures, derivations, software implementations, and validation engines were produced solely by me using personal computational resources.

### 3. Original Contribution

Original contributions include Geometric Worldline Foundations (GWFM), the Single Entity Field Interpretation (SEFI), Dynamic Entity Field Integration (DEFI), a unified operator framework, geometric photonic quantum error correction, golden-ratio DNA geometry, and displacement-engineered warp-field geometry.

### 4. Contribution of Each Manuscript

GWFM defines the worldline ontology and invariants. SEFI introduces identity-space geometry and sovereignty invariance. DEFI derives dynamical invariance through a variational construction. Unified Geometric Field Theory synthesizes SEFI, DEFI, and GWFM. Applied works extend the framework to photonic QEC, DNA geometry, and displacement-field systems.

### 5. Software Contributions

SEFI-PY and SEFI\_QEC\_Stack implement worldline geometry, identity-space dynamics, DEFI stability manifolds, geometric QEC stabilizers, multi-decoder correction pipelines, syndrome transport, and warp-residual analysis.

### 6. Declaration

I declare that all work submitted is my own; all manuscripts were solely authored by me; all mathematical constructions and software engines are original; no part of this submission has previously been submitted for another degree; and all external sources have been properly cited.

Signed,
