Graduate Research Office
University of Westminster
London, United Kingdom

Dear Members of the Graduate Research Office,

I am pleased to submit my application for the **PhD by Published Work** pathway at the University of Westminster. The enclosed submission package represents a unified and independently developed research program spanning geometric field theory, worldline physics, identity-space geometry, dynamical invariance, and photonic quantum error correction. All manuscripts, mathematical constructions, and software engines included in this submission were solely authored and developed by me.

The research program integrates three complementary frameworks: **SEFI (Single Entity Field Interpretation)**, **DEFI (Dynamic Entity Field Integration)**, and **GWFM (Geometric Worldline Field Model)** into a coherent geometric field theory.

The accompanying manuscripts present original contributions including a worldline-based geometric foundation for field behavior, a four-layer identity-space geometry, a coupled variational system linking identity and worldline dynamics, a unified operator framework for stability and correction, geometric photonic quantum error correction, a golden-ratio geometric model of DNA stability, and a displacement-engineered warp-field geometry with explicit stability constraints. These contributions are supported by executable validation engines, **SEFI-PY** and **SEFI_QEC_Stack**.

I respectfully submit this body of work for consideration toward the award of the **Doctor of Philosophy (PhD) by Published Work**. I believe the unified geometric field program demonstrates the originality, coherence, and sustained research contribution required for this pathway. Thank you for your time and consideration.

Sincerely,

Jason Duran Dutton

Submission Includes:

- Publication Portfolio documenting core theoretical manuscripts, applied extensions, canonical structures, and dissertation-scale treatise.
- Integrative Commentary synthesizing the unified geometric field program and its original contributions.
- Contribution Statement confirming sole authorship, independence of research, and originality.
- Academic CV summarizing research background, manuscripts, software engines, and professional experience.
- Submission Metadata document listing manuscripts, repositories, and submission identifiers.
